

Reports of the world café table 13.11.2015r.

What are the common global challenges on recycling?

In this part of the session, a meeting with the different actors involved in the debate on specific topic - on the theories discussions we had the opportunity to meet and reflect together on recycling global challenges.

All persons in the discussing panel - have expertise in the subject of recycling, environmental protection and innovation in this field, which is why the discussion was very successful and useful to know the opinions of others also helped establish the basic operation of the subject the common global challenges on recycling.

Together we have made arrangements and the most important tasks in this topic:

- **Population awareness**

A very important element of this action is to increase the awareness of people, this task can be accomplished by the system of educational activities.

- **Good motivation**

Good motivation - it depends on public awareness. People needs to know the risks, opportunities and good practices and their impact on people life and the environment.

- **Balance**

In all its actions is very important balance: it applies to recycling education, law regulations in the country, the cooperation between public institutions and the private sector.

- **Laws standardisation**

Laws on recycling in all EU countries should be in uniform standard.

- **How we can reduce water**

Important factor is to improve the technology of water consumption in the recovery of recyclable materials.

- **How we can implement recycling issues**

It is good to introduce standardization and good projects (already completed) from other countries in order to promote recycling.

- **Change our mind recycling = opportunity**

Change opinions - that recycling = a problem, recycling is a great opportunity for humanity - and only depends on us how we manage this issue globally.
